

To whom it may concern

The purpose of this letter is to confirm that **Ibrahim Adigun Bolatan** took the course listed below (on edx.org website) within the confines of the AppsWorkforce.com lab. AppsWorkforce is a product of Fertile-Tech Business Systems (FTBS).

- **Agile Development Using Ruby on Rails (CS169 6.00x)**

The course was offered online by Professor Amando Fox and Professor David Patterson from University of California at Berkley (UC Berkley). According to the latest US News rankings, the top source for college rankings in the United States, UC Berkley ranks as the 7th best computer science school in the world (see <https://www.usnews.com/education/best-global-universities/computer-science>). The course curriculum was a difficult one and Ibrahim was the only student in the lab that completed and passed the course.

I am aware of the fact that Ibrahim had completed several massively open online courses (MOOCs) similar to the course highlighted above . He completed these courses prior to joining the lab and during his tenure at the lab as well. From the very first day Ibrahim joined us his grasp of programming was impressive for a young man his age. We immediately asked him to become a lab assistant and tutor other students learning in the lab. He's the only student we hired as a lab assistant prior to completing a programming course within the confines of the lab.

Outside of his responsibilities as a lab assistant under the AppsWorkforce brand. Ibrahim also proved himself an asset to the FTBS brand by conducting research for a mobile application development project we embarked upon as well as being responsible for managing content for a website we deployed for a client. Though his tenure at the lab was just slightly over a year (April 2016 -August 2017), this young man has proven that he has a strong work ethic, that he is passionate about his craft and that he can be depended upon to carry out his tasks in a timely fashion.'

It is my professional opinion that Ibrahim will continue to learn and eventually grow into a very capable software developer. He would be a valuable addition to any programming related endeavor and I highly recommend him for any undertaking he embarks upon in the future.

Best Regards,

Segun Sobulo

Senior Analyst Developer @ FTBS
